### DETAILED ACTION

1. This Office Action is responsive to the Amendment filed on 08/08/2005.

### ***Claim Rejections - 35 USC § 102***

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

3. Claims 1, 3-8 and 10-28 are rejected under 35 U.S.C. 102(e) as being anticipated by Goldstein et al (US Patent No. 6,928,244).

Regarding claims 1, 8, 16, 17, 22 and 28, referring to Figures 6 and 7, Goldstein teaches an optical add/drop multiplexing apparatus (i.e., wavelength add-drop device 700, Fig. 6) comprising:

a photonic switching fabric (i.e., optical NxM matrix switch 720A, Fig. 6) operably coupled to drop but not add optical data streams wherein the photonic switching fabric comprises single sided mirrors configurable to drop but not add optical data streams (col. 7, lines 52-55); and

a combiner (i.e., optical NxM matrix switch 720B and optical multiplexer 730, Fig. 6) operably coupled to combine passed optical data streams from the photonic

switching fabric (i.e., optical NxM matrix switch 720A) together with added optical data streams (col. 7, lines 4-58).

Regarding claims 3, 10, 18 and 23, Goldstein further teaches the added optical data streams are not limited to the wavelengths of the dropped optical data streams (Figs. 6 and 7).

Regarding claims 4 and 11, Goldstein further teaches wherein the combiner is a passive coupler (Figs. 6 and 7).

Regarding claims 5, 12, 19 and 24, Goldstein further teaches the combiner comprises filter logic for blocking an out of band optical data stream (Figs. 6 and 7).

Regarding claims 6, 13, 20 and 25, Goldstein further teaches a demultiplexer (i.e., optical demultiplexer 710, Figs. 6 and 7) operably coupled to de-multiplex, optical data streams from an incoming fiber and provide the demultiplexed optical data streams as inputs to the photonic switching fabric (col. 7, lines 4-58).

Regarding claims 7, 14, 21 and 26, Goldstein further teaches the photonic switching fabric (i.e., optical NxM matrix switch 720A, Fig. 6) is operably coupled to output the dropped optical data streams separately from the passed optical data streams (Figs. 6 and 7).

Regarding claims 15 and 27, Goldstein further teaches each added optical data stream is maintained in-band using controls external to the combiner (Figs. 6 and 7, col. 7, lines 4-58).

***Response to Arguments***

4. Applicant's arguments with respect to claims 1,3-8 and 10-28 have been considered but are moot in view of the new ground(s) of rejection.

***Conclusion***
